Patient with a wound not on a healing trajectory (e.g. after 2–4 weeks of standard care dressings)
Review wound healing and stop and think: have I done everything I should, including use of active treatments?
No
Yes
If appropriate, start active treatment
Review progress at 7 days and 14 days
Wound progressing well and goals met
Step down to standard
Wound not progressing as expected
Wound progressing well but goals not
Continue with active treatment
Escalate to specialist clinician
Patient identified with a non-healing wound from day 1 of care
Start active treatment alongside standard care
