DYONICS[◇]
PLATINUM
Blades

DYONICS[◊] PLATINUM resection technology

The aim of the DYONICS arthroscopic resection portfolio is to make work simpler for arthroscopists by providing surgical solutions that efficiently resect tissue and/or bone^{*1} and that effectively navigate tight and hard-to-reach locations^{*2} throughout the case.

DYONICS PLATINUM blades are designed to improve quality of resection with low clogging and low risk of metal debris.²⁻⁶ They provide efficient resection which may minimise patient time under anesthesia.¹

DYONICS PLATINUM Technology and Performance

Tight clearance between inner and outer blade tips designed for precise tissue resection and minimal clogging

Fortified alloy is designed to provide durable performance and a low risk of metal debris generation

SURILLIUM™ Coating designed to reduce blade friction and helps retain sharpness throughout a procedure

*Please refer to the below product descriptions for details

DYONICS[®] PLATINUM FLYER[®] Shaver Blade

Challenge the limits

- Easily accesses tight joint spaces²
- Shown to minimise potential for damage to surrounding tissues during insertion and removal^{*2}
- Unique window designed to maximise resection rate and limit clogging

+ Access

Tapered tip facilitates easy access to tight joint spaces²

+ Assess

Tip design allows tissue manipulation to help with a thorough diagnosis

+ Address

Window design coupled with DYONICS PLATINUM technology allows for completion of meniscectomy

78%
less metal debris than
Arthrex[™] 4.0mm
Torpedo during soft
tissue resection^{†6}

Typical Procedural Use:

- Posterior meniscus resection
- Other meniscus cleanup

Objectives:

- Use tapered tip to easily access and manipulate meniscus in the posterior aspect of the knee
- Address a variety of meniscal resection needs using unique window shape

Competitor

DYONICS 4.0mm
PLATINUM FLYER

Concave cut design increases window area up to 57% vs straight cut design⁷

*n=8 †As demonstrated in bench-top testing at maximum settings.

DYONICS[®] PLATINUM Blades

Specialised solutions for clinical challenges in shoulder and knee procedures

BONECUTTER[®] PLATINUM Blades

Multitask more efficiently^{8,9}

- Resects both soft tissue and bone with a single blade, eliminating the need for a burr¹
- Ability to run at 10,000 rpm allows for aggressive and controllable bone resection^{*11}

SOFT TISSUE RESECTION RATES^{†4}

112% faster
soft tissue resection
rate than 3.8mm
Arthrex Bone Cutter^{†4}

Typical Procedural Use:

- Subacromial decompression
- Anterior cruciate ligament reconstruction

Objectives:

- Stop acromial impingement; clear obstructing bursa; debride frayed rotator cuff
- Remove ACL stump; prepare notch; clear field of tissue

^{*}Working range of 4,000-10,000 rpm

[†]As demonstrated ex vivo at maximum settings for 3.5mm DYONICS PLATINUM BONECUTTER. Tested against various competitor blades

INCISOR[®] Plus PLATINUM Blades

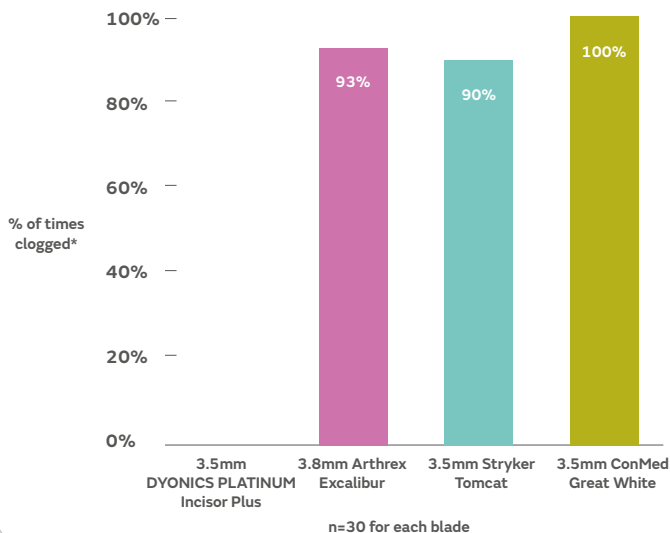

Take a bite out of inefficiency

- Tooth-to-tooth design to allow for an aggressive and efficient cut.
- Soft-tissue resection rate was significantly ($p < 0.05$) higher than leading competitive blades and had less clogging^{*†4,12}

0% blades clogged^{†5}

CLOGGING RATES^{*4}

66% FASTER
resection rate than
3.8mm Arthrex
Excalibur^{†4}

Typical Procedural Use:

- Rotator Cuff
- Anterior cruciate ligament reconstruction

Objectives:

- Remove frayed/degenerated rotator cuff
- Remove ACL stump; clear field of tissue

*As demonstrated ex vivo at maximum settings

†3.5mm PLATINUM INCISOR Plus; As demonstrated in cadaveric study, n=8 surgeons
Tested against various competitor blades

SYNOVATOR[®] PLATINUM Blades

Protect what you don't resect

- Dual inner cutting windows designed to facilitate shallow cuts for focused resection
- Soft-tissue resection rate outperformed leading competitive blades^{*4,12} and had less clogging^{†4}

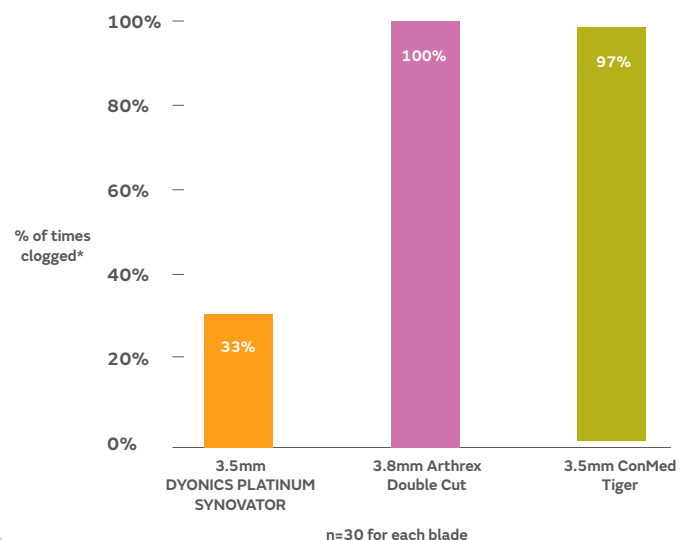

67%

lower incidence
of clogs than
3.8mm Arthrex
Double Cut^{*4}

65% FASTER
resection rate than
3.8mm Arthrex
Double Cut^{*4}

CLOGGING RATES^{*4}

Typical Procedural Use:

- Meniscectomy
- Synovectomy

Objectives:

- Remove torn tissue; stabilise meniscal rim
- Full or partial excision of synovial membrane

^{*}As demonstrated ex vivo at maximum settings

[†]PLATINUM SYNOVATOR 3.5mm blade. Tested against various competitor blades

Full radius DYONICS PLATINUM Blades

Resect and protect with one blade

- Combines a wide cutting window with toothed inner blade and smooth outer blade
- Oval window and smooth outer edge designed to draw in large volumes of tissue while avoiding damage to surrounding areas

35% FASTER
resection rate than
4.0mm Arthrex
Dissector^{†9}

Typical Procedural Use:

- Subacromial Decompression
- Anterior Cruciate Ligament Reconstruction

Objectives:

- Grab and resect frayed tissue under the acromion; clear obstructing bursa
- Remove ACL stump; graft; clear field of tissue

CLOGGING RATES^{†9}

*Tested against various competitor blades

[†]In bench top testing

Solution offering

Smith and Nephew DYONICS ELITE burrs for knee and shoulder arthroscopy procedures complement our PLATINUM Blades.

ELITE burrs run at 10,000 rpm, the fastest speed available on our DYONICS II POWER Controller

Blade style		3.5mm	4.00mm	4.5mm	4.5mm Curved	5.5mm
Aggressive  Gentle	BONECUTTER [®] PLATINUM		•	•		•
	INCISOR [®] Plus PLATINUM		•	•	•	•
	Full Radius PLATINUM			•		•
	SYNOVATOR [®] PLATINUM		•	•	•	•
