+ Changing the course of rotator cuff progression

The REGENETEN Bioinductive Implant supports the body’s natural healing response to promote new tendon-like tissue growth and change the course of tear progression.^{1,2,9-11} Derived from highly purified bovine Achilles tendon, it creates an environment that is conducive to healing.^{1,2,9,27}

What it is and how it works

- Proprietary, highly porous implant design facilitates the formation of new tendon-like tissue.^{1,2,9,27}
- New tissue reduces the peak strain at the site of the tear.^{12**}
- Histology at 6 months show dense regularly orientated tendon-like tissue at the site of implantation.^{9,13*}

* On human biopsy (n=1) and in-vivo sampling

** based on finite element analysis

*REGENETEN is...restorative, not reparative.
If you believe in biology, this is a big step.*

Felix H. "Buddy" Savoie III, MD
Chairman of Orthopaedic Surgery
Chief of Sports Medicine
Tulane University School of Medicine
New Orleans, LA

+ Open-architecture, now open to even greater possibilities

The unique open-architecture design of HEALICOIL anchors reduces the amount of implanted material in the shoulder compared to traditional, solid-core anchors.²⁸

- May facilitate greater increase in rotator cuff thickness vs competitor⁵
- May provide a biologic healing advantage^{4,5}

Faster, more complete bone infill than Arthrex's Biocomposite material.

HEALICOIL[◊] REGENESORB[◊]

Arthrex Biocomposite Corkscrew[®] FT

Comparisons of bone infill, measured via μ CT, at 6 and 18 months in a pre-clinical study.⁸

The real advantage of the [HEALICOIL] open architecture is that the stem cells from the bone marrow can reach the bone-tendon interface to promote healing where it is most needed.

Jan Vonhoegen, MD
Specialist for Orthopaedics and Trauma Surgery

+ Least amount of suture displacement during cyclic loading vs competitors¹⁴

69%

less suture displacement than Arthrex BioComposite SwiveLock[®] 5.5mm Self-Punching (SP) after cyclic loading for 500 cycles*

94%

less suture displacement than Healix Advance[™] 5.5mm SP Biocomposite Anchor after cyclic loading for 500 cycles**

Proven internal locking mechanism¹⁵

By descending a plug in the distal implant, the suture is securely locked in place providing an additional point of fixation.***

Most open architecture design vs competitors^{16****}

- Three times more open than Arthrex BioComposite SwiveLock[®] 4.75mm SP
- Four times more open than Arthrex BioComposite SwiveLock[®] 5.5mm SP
- May facilitate healing by allowing access of bone marrow and associated stem cells to the repair site^{4,5}
- Shown to facilitate better bone ingrowth than solid anchors^{4,17}

* As demonstrated in benchtop testing; p = 0.002

** As demonstrated in benchtop testing; p < 0.001; All Healix Advance 5.5 mm SP Biocomposite Anchors failed to complete the cyclic loading due to suture slipping within the anchor construct under the maximum cyclic load of 45 N

*** As demonstrated in benchtop testing

**** Compared to Arthrex, BioComposite SwiveLock 4.75mm SP, 5.5mm SP and Healix Advance 5.5mm SP Biocomposite Anchor

Least amount
of foreign material vs competitors^{16****}

+ No other biocomposite can do this, a unique formulation of proven materials

Effective absorption and bone replacement in 24 months.^{6-8*} REGENESORB material is designed to provide a jump start in bone healing and formation.

Calcium sulfate makes the difference in REGENESORB^{19, 29, 30}

Calcium Sulfate: Works in early healing stages at 4-12 weeks¹⁸⁻²⁰

β-TCP: Sustained bone formation for up to 2 years^{21, 22}

PLGA: Comprised of natural products — lactic acid and glycolic acid^{23, 24}

Absorption and bone replacement The timeline of implant

REGENESORB material is designed to remain mechanically stable for a minimum of six months^{**} before being absorbed and replaced by bone within 24 months.^{6-8, 25, 26*}

* Demonstrated clinically and *in vivo*
** As demonstrated *in vivo*

The difference for me with REGENESORB is its base is PLGA, which has different resorption characteristics and tends to resorb. On MRI follow-ups of patients, we noticed the material is actually changing to bone, and much earlier too — usually in less than two years — it's a major advantage.

Ian Lo, MD FRCS(C) Assistant Professor
University of Calgary

Ordering information

REGENETEN® Implants

Reference #	Description
72205306	Medium Bioinductive Implant with Arthroscopic Delivery (1)
72205307	Large Bioinductive Implant with Arthroscopic Delivery (1)

REGENETEN Anchors

Reference #	Description
72205205	Bone Anchors (3) with Arthroscopic Delivery System
72205201	Tendon Anchors (8)

REGENETEN Accessory Devices

Reference #	Description
72205202	Tendon Marker (2)
72205206	Tendon Stabilizing Guide (1)
72205199	Bone Anchor (1)

HEALICOIL® REGENESORB® Suture Anchors Pre-loaded with ULTRATAPE and ULTRABRAID®

Reference #	Description
72203705	HEALICOIL REGENESORB Suture Anchor, 4.75mm, with one ULTRATAPE Suture, blue, and one #2 ULTRABRAID Suture, cobraid-black
72203697	HEALICOIL REGENESORB Suture Anchor, 4.75mm, with one ULTRATAPE Suture, cobraid blue, and one #2 ULTRABRAID Suture, blue
72203708	HEALICOIL REGENESORB Suture Anchor, 5.5mm, with one ULTRATAPE Suture, blue, and one #2 ULTRABRAID Suture, cobraid black
72203801	HEALICOIL REGENESORB Suture Anchor, 5.5mm, with one ULTRATAPE, cobraid blue, and one #2 ULTRABRAID Suture, blue
72203704	HEALICOIL REGENESORB Suture Anchor, 4.75mm, with two #2 ULTRABRAID® sutures, blue, cobraid blue
72203706	HEALICOIL REGENESORB Suture Anchor, 5.5mm, with two #2 ULTRABRAID sutures, blue, cobraid blue
72203707	HEALICOIL REGENESORB Suture Anchor, 5.5mm with three #2 ULTRABRAID sutures, blue, cobraid blue, cobraid black

HEALICOIL® REGENESORB® Suture Anchors Pre-loaded with MINITAPE®

Reference #	Description
72205386	HEALICOIL REGENESORB Suture Anchor, 4.75mm, with three MINITAPE Sutures
72205388	HEALICOIL REGENESORB Suture Anchor, 5.5mm, with three MINITAPE Sutures

HEALICOIL REGENESORB Accessory Devices

Reference #	Description
72203709	HEALICOIL REGENESORB Threaded Dilator, 4.75mm, reusable
72203710	HEALICOIL REGENESORB Threaded Dilator, 5.5mm, reusable
72203951	HEALICOIL REGENESORB Threaded Dilator, 4.75mm, disposable
72203952	HEALICOIL REGENESORB Threaded Dilator, 5.5mm, disposable

HEALICOIL PK Suture Anchor Pre-loaded with ULTRATAPE and ULTRABRAID

Reference #	Description
72203981	HEALICOIL PK Suture Anchor, 4.5mm, with one ULTRATAPE Suture, blue
72203982	HEALICOIL PK Suture Anchor, 4.5mm, with one ULTRATAPE Suture, cobraid blue
72203983	HEALICOIL PK Suture Anchor, 5.5mm, with one ULTRATAPE Suture, blue, and one #2 ULTRABRAID Suture, cobraid black
72203984	HEALICOIL PK Suture Anchor, 5.5mm, with one ULTRATAPE Suture, cobraid blue, and one #2 ULTRABRAID Suture, blue
72203378	HEALICOIL PK Suture Anchor, 4.5mm, with two #2 ULTRABRAID Sutures, blue, cobraid blue
72203379	HEALICOIL PK Suture Anchor, 5.5mm, with two #2 ULTRABRAID Sutures, blue, cobraid blue
72203380	HEALICOIL PK Suture Anchor, 5.5mm, with three #2 ULTRABRAID Sutures, blue, cobraid blue, cobraid black

HEALICOIL PK Suture Anchors Pre-loaded with MINITAPE®

Reference #	Description
72205381	HEALICOIL PK Suture Anchor, 4.5mm, with two MINITAPE Sutures
72205382	HEALICOIL PK Suture Anchor, 5.5mm, with two MINITAPE Sutures
72205383	HEALICOIL PK Suture Anchor, 5.5mm, with three MINITAPE Sutures
